cardano	-4.09%	0.9206	0.003084
vechain	-3.97%	0.0239	0.002371

In the latest market analysis, Dogecoin leads the top losers with a decline of 5.41%, trading at \$0.2244. Following closely are Uniswap and Solana, experiencing drops of 4.90% and 4.40%, respectively. Overall, the table reflects notable downward pressure across multiple cryptocurrencies, highlighting the volatility within the current market environment.

The intraday price series for Ethereum exhibits a downward trend, decreasing from a peak of \$4,482.03 to approximately \$4,330.92 over the observed period. This decline highlights heightened volatility, marked by varying price movements, including a notable drop of nearly \$150 within a short time frame. Key patterns indicate a consistent bearish sentiment, with multiple lower highs and lower lows contributing to the downward momentum.

The intraday price series for Algorand shows a declining trend throughout the observed period, with prices decreasing from a high of 0.2659 to a low of 0.2552. Overall volatility was moderate, characterized by gradual price declines interspersed with minor recoveries, indicating a bearish sentiment. A key pattern of consistent lower lows suggests potential continued weakness unless a reversal pattern is established.

During the observed intraday period, Bitcoin exhibited a downward trend, starting at \$117490 and declining to approximately \$115610. The price experienced notable volatility, with fluctuations reflecting a consistent decline punctuated by minor recoveries. Key patterns include a rapid decrease in value during the early hours, indicating potential market pressure or bearish sentiment among traders.
